SensorReading

The valid range is not checked in this class, leading to the only possible tests beeing regarding the correct output of the attributes. This is covered by simple Statement coverage. There are also no branches or loops.

A refactoring to move the validation into this class should be brought up in the presentation

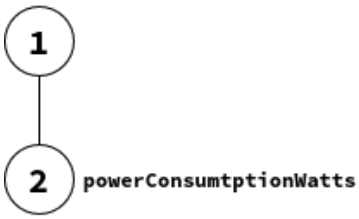

Figure 2: CFG for getPowerConsumptionWatts

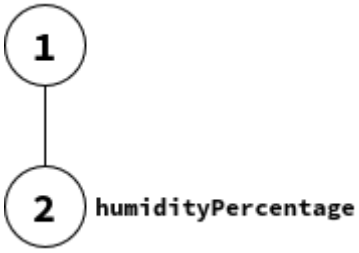

Figure 3: CFG for getHumidityPercentage

Tests

before

construct temperatureCelsius: 20 humidityPercentage: 45 powerConsumptionWatts: 650

Test 1

get temp

Test 2

get hum

Test 3

get powercons
